Clinics in Obstetrics

Clinics in obstetrics is a unique book catering to the need of practicing clinicians and also examination going doctors in particular. Its primary emphasis has been a stepwise description and analysis of all common case scenarios in obstetrics which includes history, examination, differential diagnoses enabling the clinician to rationalize his/her approach to handling a case with confidence.

This book is an asset to the undergraduate and postgraduate students, providing comprehensive clinical information easing out the stress of examination going students.

Considering that 'Obstetrics' is ever evolving with the advent of newer scientific technologies to add value to

maternal and fetal surveillance; this book has effectively incorporated these newer concepts making it a 'ready reckoner' book of reference especially for the practical examination.

To summarise, this book could be considered as a 'Comprehensive reference manual' in the library of all medical colleges and clinics which will add value aiding to the systematic analysis of all case scenarios to arrive at the correct diagnosis.
